EDUCATION

University POLITEHNICA of Bucharest *Sep. 2025 – Jun. 2029*
B.Sc. in Systems Engineering, Faculty of Automatic Control and Computer Science *Bucharest, Romania*

- Relevant coursework: **Computer Programming and Programming Languages, Operating Systems, Algorithm Design.**
- Activities and societies: **IT Department of LSAC (Students League of Automatic Control and Computer Science).**

PROJECTS

Team Lead, LAN Party @ *IT Department for the League of Students* *Feb. 2026 – Mar. 2027*
React, TypeScript, SCSS, Node.js, MongoDB, Unity
lanparty.lsacbucuresti.ro

- Leading a team of 9 to maintain and update the **LanParty Event** website.
- **Contributed** to a **Unity 2D survival wave game** for **LAN Party**, the annual gaming event organized by **LSAC Bucharest**, designing a meteor attack mechanic where meteors fall on the player's current position with a shadow indicator showing the upcoming impact location.

CSA @ *IT Department for the League of Students* *Jul. 2026 – Nov. 2026*
React, TypeScript, SCSS, Node.js, MongoDB

- Built a dynamic staff carousel using **React** and **TypeScript** with a **custom reducer** to easily show users who they are contacting, helping **100+ users** efficiently send feedback.
- **Improved mobile UX** by redesigning the team management interface, replacing a flip-button, with 2 separate buttons to easy **UX navigation** on **mobile platforms**.

Team Lead, GameDev @ *IT Department for the League of Students* *Feb. 2026 – Present*
Godot, GDScript, Nakama

- Leading a team of 6 to build a **multiplayer game** in **Godot 4.6** with **GDScript** and a **Nakama** backend, where a number of maximum 20 players can race in parallel on procedurally generated maps and use abilities against one another.
- Coordinating task design, code reviews, and PR merges across the team, brainstorming features and ensuring task compatibility with the multiplayer architecture, with a working host/join lobby, leaderboard, and 3 player abilities currently functional.

Terminal | C *Mar. 2026 – Present*

- Building a custom **Unix shell in C** following the **CodeCrafters** "Build Your Own Shell" track, after exploring "good first issue" tickets on the **Microsoft Terminal** repository as an introduction to open-source contribution.
- Implemented the **REPL loop**, built-in commands (`exit`, `echo`, `type`), and external program execution via **fork + execvp + wait**, with manual **PATH** parsing and executable lookup, currently extending toward navigation, redirection, and pipes.

EXTRACURRICULAR ACTIVITIES

Pax | React, Flask, PostgreSQL, GraphHopper, Docker *Mar. 2026*

- Won **1st place at HackIT 2026**, a **9-hour hackathon** organized by the **LSAC IT Department** and sponsored by **Systematic** and **RGDA**, building an "anti-Google Maps" routing web app that calculates paths avoiding specific users from a custom **Avoid List**.
- Delivered a containerized full-stack solution with a **React** frontend, a **Flask + PostgreSQL** backend behind an **Nginx** reverse proxy, and self-hosted **GraphHopper** as the routing engine using polygon-based zone exclusion, with continuous **GPS** sync, auto-recalculated routes, and 4-level proximity alerts.

NSDSS Summer School & Hackathon | Mininet, Fortinet, Python, CCNA *Jul. 12 – Jul. 18, 2026*

- Completed a 1-week intensive **Network Security and Design Summer School (NSDSS)** guided by **Răzvan Rughiniș** and the **Hackademy Team**, combining advanced **CCNA 2 and 3** routing concepts with dedicated **Web Development** and **Python** coursework through practical **Fortinet**, **Mininet**, and **Cisco Packet Tracer** labs.
- Developed **Web-Mininet-Architect** during the concluding **8-hour hackathon**, building a visual drag-and-drop topology builder featuring **live code generation** that instantly translates the UI network architecture into deployable **Mininet Python** scripts.

CERTIFICATIONS

- **CCNA: Introduction to Networks**
- **CCNA: Switching, Routing, and Wireless Essentials**
- **CCNA: Enterprise Networking, Security, and Automation**

SKILLS

- **Languages:** C, C++, C#, Python, JavaScript, TypeScript, GDScript
- **Web & Backend:** React, Node.js, HTML, CSS, SCSS
- **Databases & Infrastructure:** MongoDB, Docker Compose, Linux
- **GameDev & Tools:** Godot, Unity, raylib, Git
